LEXACOM®
Migrating to the latest version of Vision

The good news for all practices using Lexacom in Scotland is that Lexacom 3 fully integrates with all versions of Vision.

In this document we'll walk you through the changes to be made, with a step by step guide of who needs to do what.

Summary

If you are on **Vision Aeros** already you don't need to do anything.

If as part of the reprovisioning you are moving from **Vision LAN** or **EMIS** there are a couple of things that need to be done to ensure the integration continues to work.

> ⓘ *If you have a second desktop, you're on Vision Aeros. If you have a desktop icon for Vision, you're on Vision LAN.*

Practices currently using **EMIS** or **Vision LAN** need to make a change in the Lexacom Admin account (amend the clinical system), and install a small application called *Lexacom RDP Client 1.1.1.exe* on each workstation. A combination of the Lexacom administrator, our helpdesk and Health Board IT will complete these steps.

All practices that are moving to **Vision Aeros** need to ensure Cegedim have installed the Lexacom RDP as part of their configuration.

For practices currently using **Vision Aeros**, no changes are required to Lexacom or Workstations.

Moving from EMIS or Vision LAN to Vision Aeros

a) Change in Lexacom Admin *(to be completed by practice staff)*

b) Changes to workstations *(to be completed by Lexacom / Health Board IT)*

c) The sequence to enable Lexacom 3 to integrate with Vision for all practices

a) Change in Lexacom Admin (*to be completed by practice staff*).

Log in to Lexacom Admin, and navigate to: *Settings > Clinical Systems > Add or Edit*
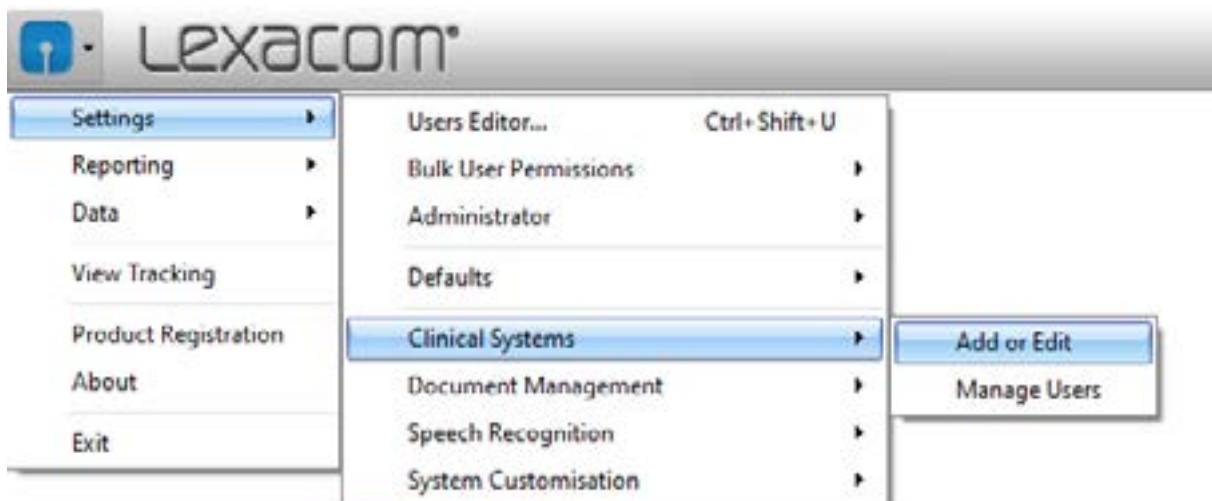

Amend the Type to **Vision Aeros**. Also change the Name text to **Vision** if required. Press **Save**.
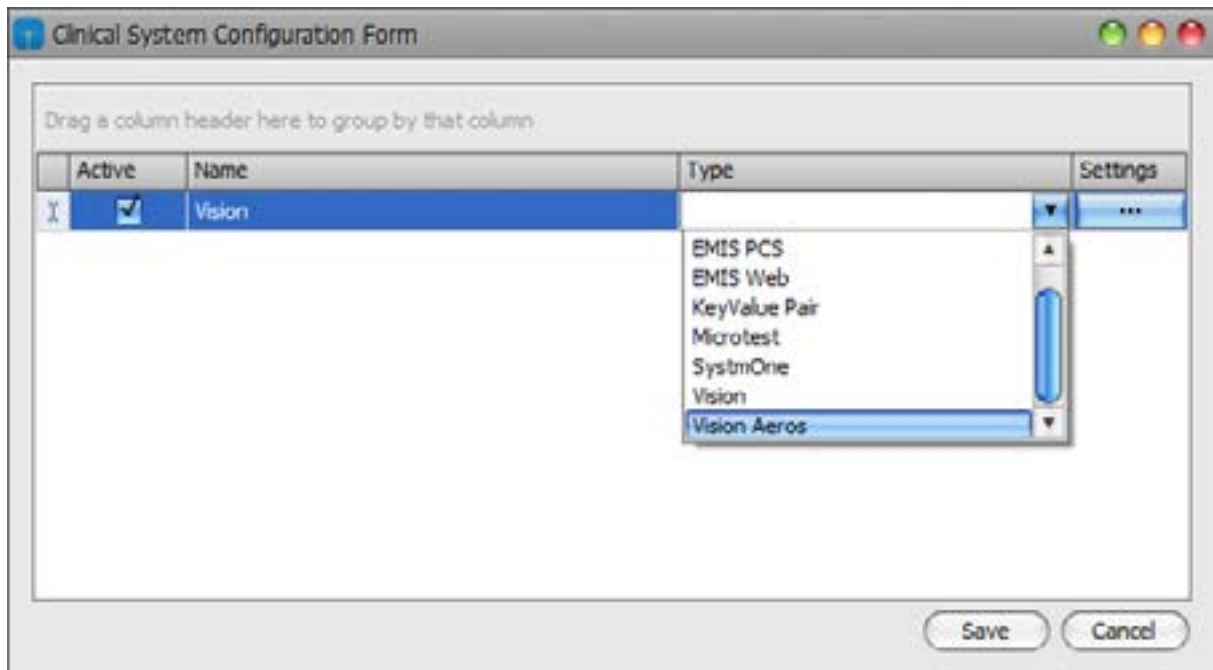

b) Changes to workstations (*to be completed by Lexacom / Health Board IT*).

It is necessary to run the *Lexacom RDP Client 1.1.1.exe* and update the registry on each workstation that runs Lexacom. Usually this will require admin rights. Restart the workstation after installing.

c) The sequence to enable Lexacom 3 to integrate with Vision for all practices

Ensure Cegedim are aware that Lexacom is used, they will install the Lexacom RDP server as part of their setup. To integrate Lexacom 3 with **Vision Aeros**, follow these steps.

01. Start your Vision Remote Desktop Connection

02. Login to your Vision Remote Desktop Connection

03. Once logged in, find the following shortcut on the Remote Desktop:

04. Double click the shortcut

05. This will load the Lexacom RDP Server into the Remote Desktop System tray in the bottom right corner of the Remote Desktop

06. You will see the Lexacom 3 logo in the System tray and if you move the move over it will read Lexacom RDP Server.

07. Start Vision

08. Login to Vision

09. Open Consultation Manager

10. Select your Patient

11. Return to your Local Desktop

12. Start Lexacom 3

13. Login to Lexacom 3

14. After login in the bottom right of the Lexacom Window you will see "Connected to Vision"

Migration complete

At this stage, Lexacom 3 should now be connected to the latest version of Vision, with a working integration.

If anything isn't working correctly for you, please do get in touch with our technical support team on *01295 236910 (option 3)* or *helpdesk@lexacom.co.uk* and we will be happy to assist you.
